Hearing Aid Repair Acknowledgement

It is our experience that hearing aids over five years old can be repaired. However, there are recurrent problems with repairing hearing aids of this age:

1. Repairing hearing aids to manufacturer's specifications only bring the unit back to that of the year in which it was built.
2. Changes in hearing may have resulted, in which case; a repaired hearing aid may still not provide the necessary amount of amplification.
3. Changes in ear size and shape with time may cause a repaired hearing aid to feedback more readily.
4. Older hearing aids are less reliable and require more frequent repairs than new hearing instruments.

By signing below, I verify that Hearing Center Inc. has advised me of the systematic problems with an older hearing aid. I have been informed that replacing my hearing aid, rather than repairing it, may be warranted.
